

# TQ35YD3

## I. Product Description:

This modular flooring is made of a composite polymer thermoplastic elastomer material. Its scientific design ensures flexibility, elasticity, and comfortable comfort.

## II. Product Features:

1. Approximate dimensions: 304.8\*304.8\*12.7mm.
2. Two-layer surface construction: The surface features a special frosted cross-grain pattern for increased resistance to movement. The double-layer support structure provides stability and strength. The 12.7mm thickness provides increased durability.
3. Soft and Resilient: TPE material is flexible, allowing for quick recovery without breaking, ensuring increased durability.
4. Three-in-one Square Buckle: The retractable buckle features a barbed hook structure for a tight fit and resistance to falling apart, effectively preventing thermal expansion and contraction.

## III. Product Physical Properties:

1. Ball Rebound Rate  $\geq 98\%$
2. Vertical Deflection  $\geq 0.6\text{mm}$
3. Elongation at Break  $\geq 180\%$
4. Impact Absorption  $\geq 30\%$
5. Friction Coefficient  $\geq 0.4\mu$
